GOT THE WINTER BLUES?

A bad winter, it turns out, is actually a pretty good thing. In agriculture, a big snowpack helps insulate the ground, gives the soil plenty of water in the warmer months, and can help protect crops like wheat, berries and fruit.

Severe cold also keeps bugs and bacteria populations low.

A heavy winter helps recharge, wetlands, lakes and streams – as long as all that snow slowly melts away into the ground in the spring, rather than a rapid thaw that keeps all that moisture from soaking into the soil.

A fun hobby that exercises your brain and gives you a sense of accomplishment - that's the perfect description of the numbers puzzle craze from Japan called **SUDOKU**. This great brain game is fun to play, and anyone can do it. Playing can even help delay dementia by teaching your brain to think in a whole new way.

How to Play
The point of sudoku is not to repeat any numbers while you're filling in the grid. The challenge is figuring out which number fits into which box. The sudoku grid has nine boxes; within each box are smaller boxes that have nine squares each. Some of those squares will already have numbers in them.

- Fill in each square with one digit, using only the numbers one through nine.
- Numbers cannot repeat within an individual box of nine squares.
- Numbers cannot repeat down a column.
- Numbers cannot repeat across a row.

Why Play Sudoku?
Sudoku stimulates your mind. It keeps you practicing your logical thinking process when you are solving a puzzle, and can eventually improve your number skills. Frequent play reduces the chances of developing Alzheimers by keeping your brain active.
